ABOUT ME

Passionate and dedicated **DevOps Engineer** with a strong drive to excel in fast-paced and challenging environments. Known for a hunger to continuously learn and adapt to emerging technologies, I thrive on solving complex problems and implementing efficient solutions. With a focus on innovation and productivity, I aim to leverage my skills to streamline processes, enhance system reliability, and contribute to the overall profitability and growth of the organization.

WORK EXPERIENCE

[\[View Certificate\]](#)

DevOps & Cloud Intern – LinuxWorld Informatics Pvt. Ltd.

Worked with [Docker](#), [Kubernetes](#), [AWS](#), [Terraform](#), and [Ansible](#) to deploy and manage cloud infrastructure.

Built [CI/CD pipelines](#) using Jenkins for automated build, testing, and deployment. Implemented monitoring with [Prometheus](#) and [Grafana](#) and managed [Linux-based](#) servers.

Developed a Streamlit-based automation platform integrating DevOps tools through a centralized dashboard.

DevOps Engineer – Savitron.ai – Currently Working

Managed [Linux servers](#), Docker-based applications, and cloud infrastructure.

Built and maintained [CI/CD pipelines](#) using [Jenkins](#) and [GitHub](#).

Automated deployments and infrastructure management using scripting and [Infrastructure as Code](#) (IaC) practices.

Configured [reverse proxies](#), [SSL/TLS](#), [monitoring](#), and production environments, while deploying company projects using [Cloudflare](#) for [DNS](#), [proxying](#), and [edge networking](#).

CERTIFICATES

- ★ **AWS Cloud Quest: Generative AI Practitioner - Training Badge**
 - ★ **AWS Cloud Quest: Cloud Practitioner - Training Badge**
 - ★ **Blockchain: Understanding Its Uses and Implications (LFS170)**
 - ★ **Kubernetes: 入門 LFS158JP**
 - ★ **JASBAA 4.0 - Startup Show Casting (TRAVOZOM)**
 - ★ **AWS Cloud With Artificial Intelligence Workshop**
 - ★ **Linux Red Hat Certified System Administrator (RHCSA - EX200)**
 - ★ **PostgreSQL Bootcamp**
- Issued by [Amazon Web Services Training and Certification](#)
Oct 2025
- Issued by [Linux Foundation Training](#)
Nov 2025 & May 2025
- Issued by [LinuxWorld Informatics Private Limited](#)
Aug 2025 & July 2025
- Issued by [Udemy](#)
Nov 2024 & June 2025

EDUCATION

Bachelor's Degree in Computer Science & Engineering

August 2022 – July 2026 | Bareilly

From - Dr. A.P.J. Abdul Kalam Technical University

Specialized in **Software Engineering** and **Database Management**

Learned about the **Operating System** behavior and **Algorithms** with **Mathematics**

SKILLS & TOOLS

Core DevOps Tools

Docker, Kubernetes, Jenkins, Terraform, Ansible, Git, GitHub Actions

Cloud Platforms

Amazon Web Services, Cloudflare

Monitoring & Observability

Prometheus, Grafana, Node Exporter

Infrastructure & Automation

CI/CD Pipelines, IaC, Containerization

Operating Systems

Linux (Arch Linux, Ubuntu, RHEL, Fedora)

Programming & Scripting

Python, Bash, Flask

PROJECTS

1. Proxmox Virtualization Infrastructure (Type-1 Hypervisor Deployment)

[Demo](#) 

Concept:

Enterprise-grade virtualization stack enabling isolated compute environments for development, testing, and automation workloads.

Tech Stack:

Proxmox VE, KVM/QEMU, LXC, Debian, ZFS

Highlights:

- Provisioned multi-VM cluster with high-efficiency virtualization
- Configured virtual networking, storage pools, ISO provisioning, and containerized workloads
- Enabled a full on-prem hypervisor capability for scalable DevOps experiments

2. n8n-Driven AI Workflow Engine

[Demo](#) 

Concept:

Autonomous news, DevOps insights, and LLM-enhanced data pipelines.

Tech Stack:

n8n, Gemini API, Telegram/Discord Bots, Docker, RSS Frameworks

Highlights:

- Automated scheduling engine (45-minute continuous aggregation cycle)
- LLM-powered summarization for Kubernetes/Cloud/DevOps feeds
- Multi-platform publishing via chatbots

3. Containerized Full-Stack Travel Platform

[Demo](#) 

Concept:

End-to-end travel booking ecosystem built on a containerized microservice architecture.

Tech Stack:

React, Node.js, Express, MongoDB, Docker Compose

Highlights:

- Secure auth workflows, booking CRUD flows, and service isolation
- Modern glass-morphism UI across devices
- Full containerization for seamless deployment

4. Kubernetes Auto-Scaling Web Cluster

[Demo](#) 

Concept:

Self-healing, load-adaptive web infrastructure modeling production cloud behavior.

Tech Stack:

Kubernetes (HPA), Minikube, Docker, Apache HTTPD

Highlights:

- CPU-driven horizontal autoscaling (HPA)
Simulated real-world load with 10+ replica pods
- Highly resilient NodePort exposure with live traffic testing

5. C I / C D Pipeline for Python Microservices

[Demo](#) 

Concept:

Automated integration and deployment lifecycle for Python workloads.

Tech Stack:

Jenkins, GitHub, Docker, Pytest

Highlights:

- Commit-triggered Jenkins pipeline with automated tests
- Docker image build-push-deploy flow
- Production-grade CI/CD simulation for microservices

6. Offline AI Model Ecosystem

[Demo](#) 

Concept:

Local compute environment for running LLMs and vision models without internet connectivity.

Tech Stack:

Ollama, Hugging Face, Open WebUI, DeepSeek, LLaMA 3.1, Gemma

Highlights:

- Multi-model management with hardware-accelerated inference
- Fully air-gapped AI development platform
- Integrated text and vision generation workflows
